SECTION 4.0 – SCOPE OF SERVICES

1.0 Purpose

The City of Cedar Rapids has determined that a comprehensive tree inventory is essential to the City's on-going effort to proactively manage trees, thereby minimizing the effects of future storm damage and assuring the community has a healthy, sustainable urban tree canopy. The City seeks to accomplish the following goals with this project:

- a. Locate, assess, and inventory all publicly maintained street trees located within the limits of Cedar Rapids.
- b. Record critical tree attributes by professional and skilled arborists.

2.0 Background

The City of Cedar Rapids is seeking proposals from qualified Firms to conduct a comprehensive tree inventory of the trees under the responsibility of the City's Forestry Division. The tree inventory will be used as a management tool by Forestry staff within the Parks and Recreation Department. This management tool shall focus on tree risk/public safety, tree protection/preservation, and tree replacement. The tree inventory will become part of the City's asset inventory and stored in the City's enterprise ESRI geodatabase. It must also include attributes needed for utilization of the iTREE suites of software.

The project areas shall be on the City street Right of Way. Golf courses and parks are not to be inventoried at this time, however there may be other areas added to the inventory that do not fit into the previously mentioned categories. There have been some rough estimates made for total number of trees within the proposed area. These estimates range from 50,000 to 70,000 street trees. Total area of Cedar Rapids is 72 square miles with 720 miles of streets.

3.0 Data Delivery Format

- 3.1 All tree inventory data shall be delivered in USDA iTree Streets and ESRI formats. The City of Cedar Rapids currently utilizes an enterprise ESRI ArcGIS 10.3.1 environment on a SQL Server platform, therefore all geospatial data shall be delivered in an ESRI-compatible file geodatabase.
- 3.2 The inventory must be performed using GPS equipment or other GIS-compatible data collection hardware accurate to within 2 feet of the geographic center of the tree trunk.
- 3.3 The inventory shall be delivered in the following coordinate system: Iowa State Plane, North Zone (FIPS 1401), 1983 North American Datum (NAD83), 2011 Adjustment, and units in feet.
- 3.4 The Consultant shall provide a full metadata reference for all delivered data. All accompanying metadata shall be compiled to the current standard endorsed by the Federal Geographic Data Committee (FDGC).
- 3.5 The Consultant shall provide an ESRI-compatible file geodatabase containing all relevant feature datasets, feature classes, domains, tables, relationship classes, and attachments. Photos may be included as attachments or stored in a file location with hyperlinks stored in the tree point feature class.
- 3.6 The Consultant shall associate individual tree locations with existing address point and street segment identification numbers maintained by the City IT-GIS Division, which will be supplied to the Consultant by the City prior to the inventory.

4.0 Scope of Services

4.1 Data Collection Requirements

4.1.1 At a minimum, data collection must include the following:

- a. Location – Address including house number, street name, City address ID, and City street segment ID with schema matching current City GIS address and street data.
- b. Species – Trees are identified by genus and species using both botanical and common names and by cultivars where appropriate.
- c. Trunk diameter (to the nearest inch) at 4.5 feet above the ground.

d. Overall Condition

The general condition of each tree is evaluated in accordance with the International Society of Arboriculture rating system:

Excellent-Trees in this class are judged to be exceptional trees possessing the best qualities of the species. They have excellent form, very minor maintenance issues, with virtually no dead branches, deformities or nutritional problems. These trees are in an acceptable location and can be expected to achieve a full mature shape and life expectancy. (ISA Rating 100%)

Good-Trees in this class are judged to be desirable and with proper maintenance can be returned to excellent classification. They may be interfering with utility lines, planted in an overcrowded location, or have minor insect, pathogen or nutritional deficiencies. (ISA Rating 80%+)

Fair-Trees in this category have some or all of the following problems: large dead limbs representing less than one-third of the canopy, large cavities in the trunk, major deformities, girdling roots, obvious insect, pathogen, or nutritional problems. (ISA Rating 60%)

Poor-Trees in this group are in degraded condition with irreversible problems. These can include dead branches representing 50% or more of the canopy, drastic deformities, multiple trunk cavities, and severe insect, pathogen or nutritional problems. (ISA Rating 40%)

Removal-Trees in this category are either already dead or in such poor condition that removal is required. These trees have over 90% dead branches and/or have completely succumbed to insects, pathogens or nutritional deficiencies. (ISA Rating of Less than 40%)

e. Risk Assessment

During the inventory, each tree will be assigned a risk rating. A Level 2 Qualitative risk assessment will be performed based on ANSI A300 (Part 9) standards, along with the companion publication Best Management Practices: Tree Risk Assessment, published by the International Society of Arboriculture (2011). Trees are subject to various failure scenarios which help determine risk rating. The failure mode (i.e., branch, whole tree, codominant stem) with the greatest risk will serve as the overall tree risk rating. The specified time period for the risk assessment is one year.

Ratings are determined by the following criteria:

- a) Likelihood of Failure. Identifies the most probable failure and rates the likelihood that structural defect(s) will result in failure based on observed current conditions.
- b) Likelihood of Impacting a Target. The rate of occupancy of targets within the target zone and any factors that could affect the failed tree as it falls toward the target.
- c) Categorizing Likelihood of Tree Failure Impacting a Target. The likelihood of failure and target impact are combined in the matrix below to determine the likelihood of tree failure impacting a target.

Likelihood of Failure	Likelihood of Impacting Target			
	Very Low	Low	Medium	High
Imminent	Unlikely	Somewhat Likely	Likely	Very Likely
Probable	Unlikely	Unlikely	Somewhat Likely	Likely
Possible	Unlikely	Unlikely	Unlikely	Somewhat Likely
Improbable	Unlikely	Unlikely	Unlikely	Unlikely

f. Consequence of Failure

The consequences of tree failure are based on the level of target and potential harm that may occur. Consequences can vary depending upon the size of defect, distance of fall for the tree or limb, and any other factors that may protect a target from harm. Target values are subjective, but efforts will be made to assess them from the City's perspective.

g. Risk Rating

The tree’s risk rating is determined based on combining the likelihood of tree failure impacting a target and the consequence of failure in the matrix below.

Likelihood of Failure	Consequences			
	Negligible	Minor	Significant	Severe
Very Likely	Low	Moderate	High	Extreme
Likely	Low	Moderate	High	High
Somewhat Likely	Low	Low	Moderate	Moderate
Unlikely	Low	Low	Low	Low

h. Maintenance Needs

The following maintenance categories will be collected:

Immediate Removal-Trees designated as immediate removals are dead or have one or more defects that cannot be cost-effectively remedied.

Removal-Trees designated as removals should be removed, but do not pose a liability as great as the immediate priority or pose minimal liability.

Immediate Priority Pruning-Trees in this category require pruning to remove deadwood and/or broken branches that pose a potential risk to people or property. These trees have broken and/or hanging limbs, hazardous deadwood and dead, dying or diseased limbs or leaders greater than four inches in diameter.

High Priority Pruning-Trees in this category require pruning to remove deadwood and/or broken branches that pose a potential risk to people or property. These trees have broken and/or hanging limbs, hazardous deadwood and dead, dying or diseased limbs or leaders greater than two but less than four inches in diameter.

Routine Pruning-Trees in this category have characteristics that could become risks if not corrected. Deadwood is less than two inches in diameter.

Training Pruning-This category includes trees less than 20 feet in height with correctable structural problems or minor amounts of deadwood that pose little or no threat of personal injury or property damage. Pruning at this stage is relatively inexpensive but can have significant effects in the future.

Stump Removal-Tree stumps which are recommended for grinding to allow for a future planting, or to improve the appearance of the site.

Planting location-Locations where no tree exists, but fit with current city standards for a tree location. Parameters include: Minimum of 40 linear feet to the trunk of the nearest tree, minimum of 10 feet from fire hydrants, water lines, driveways and alley entrances, 10 feet from street light poles, 25 feet from street intersections, parkway must be at least four feet wide.

4.1.2 Location of Overhead Conductors

The inventory will indicate the type of overhead conductors or other utilities that are present at the tree site.

4.2 Quality Control

4.2.1 The Consultant shall be experienced in performing successful tree surveys for other similarly sized municipalities.

4.2.2 The Consultant shall have professional arborists conduct the inventory. All managing inventory arborists must be Certified Arborists through the International Society of Arboriculture.

4.2.3 An ISA Certified arborist must be on-site regularly to field-check the data collected by other staff to assure adherence to City work specifications and national industry standards.

4.3 Pricing

Offerors shall propose pricing consisting of a firm fixed price for all services rendered. Your proposal must explain in detail the components of the firm fixed price for the project. Monthly progress payments may be allowed provided such payments are based on completion of defined milestones in the project.

4.4 Timeline

The project shall begin upon approval by City Council Resolution, anticipated to be February 23, 2016. The entire inventory shall be completed by December 31, 2016.

A list of certified businesses can be viewed on the City's website:

www.cedar-rapids.org/government/departments/purchasing

Please allow up to 10 days for processing of the certificate before the business is listed.

4. Will the local preference policy be applied to all purchases for goods and services?

No, the following types of purchases are excluded:

- c. Purchases from the State of Iowa or other national contracts
- d. Sole source purchases

5. Do you have questions or feedback about the Buy Local Program?

Please send questions via email to buylocal@cedar-rapids.org

6. If I work out of my home, and my home is in Linn County, am I eligible to become a certified local business?

7. How does the Buy Local Program work?

Preference shall be applied to acceptable quotes, bids and proposals greater than \$1,000 from businesses within Linn County, Iowa who have submitted a notarized "Local Business Certificate".

Example A: Preference shall be given in the procurement of goods and/or services by bid or quote when a local Contractor's bid or quote exceeds the acceptable low bid by no more than:

10% for bids less than \$25,000

5% for bids equal to or greater than \$25,000 but less than \$200,000

1% for bids equal to or greater than \$200,000

Bid Tabulation for a 20' Enclosed Trailer

	Marion, IA	Des Moines, IA	Davenport, IA
BID PRICE	\$ 15,147.99	\$ 14,770.55	\$ 18,250.00

- This bid is less than \$25,000 so the preference is 10%
- Contractor B submitted the lowest bid of \$14,770.55
- Contractor B is not a local business
- Contractor A submitted the next lowest bid of \$15,147.99
- Contractor A is a certified local business
- $\$15,147.99 - \$14,770.55 = \$377.44 / 14,770.55 = 2.56\%$
- The difference between the two bids is 2.56% which is within 10% so the local preference applies
- The bid is awarded to the local Contractor A for \$15,147.99

Example B: Preference shall be given in the procurement of goods and/or services by Request for Proposal (RFP) by awarding additional points to the evaluation scores of proposals received from certified local businesses as follows:
